PORT-FOLIO

Graphic-Design

UX/UI

2024–2026

Katharina Schellenberg

PROJECTS

Tasks

The following work was carried out as part of various transdisciplinary and interdisciplinary projects at Stuttgart Media University.

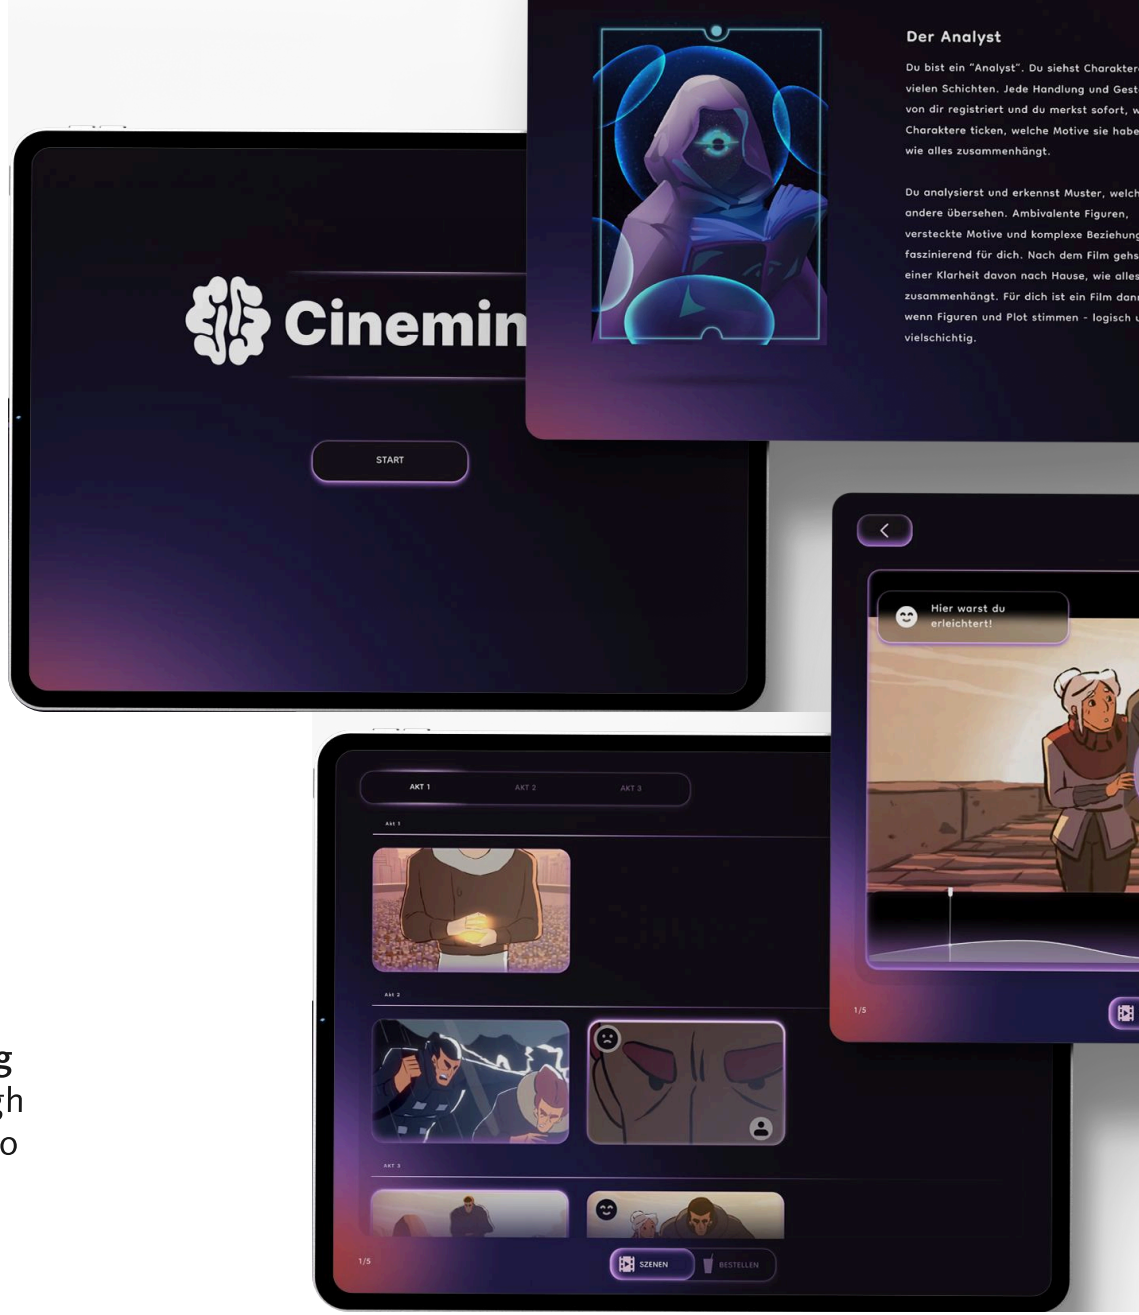

My main responsibilities consistently focused on **user-centered UX research** and **concept development**, as well as **UI design** and **prototyping** in Figma.

CINEMIND

Challenge

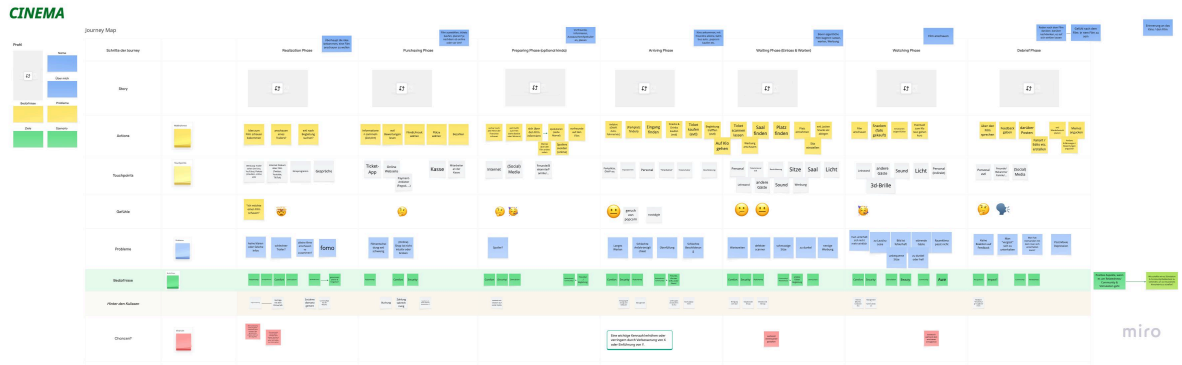

Expanding and **emotionalizing** the **cinema experience** through a user experience approach to deepen the **exchange** and **discussion** around films.

UX/UI | Prototype | Concept | Design

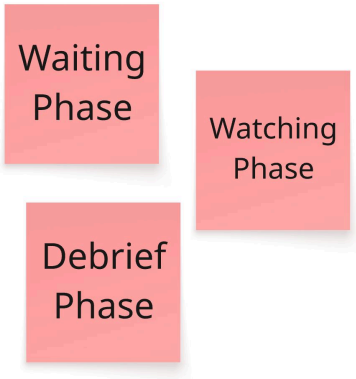

CINEMIND – research

Cinema Journeymap

	Person 1	Person 2	Person 3
Auf einer Skala von 1-10, wie wichtig sind dir Filme - Warum?	7, weil... Die jetzt nicht lebenswichtig sind, arbeite ja nicht mit Filmen. Hin und Wieder für die Unterhaltung ist es schon cool einen Film anzuschauen.	8,5 , weil gute Filme enjoy ich sehr, erstmal allgemein, entertainment, abschalten Aktivität mit anderen Menschen z.B. zu zweit mit freundin In der WG, Filmsessions Gute Filme + Socializen, Filme zeigen Filme die scheiße sind haben nen Faktor -> Horrorfilme während Corona, erschrecken, drüber lustig machen über schlechte Inszenierung etc.	8 - freue mich wenn ich eine Beschäftigung habe, mit freunden -> mag es ins kino zu gehen
Streamingdienst-Fragen			
Nutzt du Streamingdienste? Warum?	Ja, Netflix, Amazon Prime, ÖR Mediatheken, Weils on demand ist - gucken wann und wo ich will. Ich habe freie Wahl im Vergleich zu Fernsehen z.B. M: Du meinst freihe wahl was du anguckst oder? A: ja, des Programm	Seit geraumer Zeit ja, eigentlich eher nicht -> Amazon Prime, sonst andere Seiten Luxus, raussuchen was man anschauen möchte, was und wann genau, kostenpunkt hasse eigentlich streaming, werbung etc. auch add blocker kampf gegen werbung	-> ja, Netflix weil's die beste Auswahl an filme und Serien hat, nicht zu teuer
Welches Filmgenre bevorzugst du?	Drama und Comedy M: Warum die beiden? A: Die Emotionen, also bei den Genres krieg ich die meisten Emotionen vermittelt, dass ich mitfühlen kann.	Mindfuck, Christopher nolan filme, prestige, inception, ... gute Kriegsfilme, Science Fiction, abgespacedes in die zukunft blickend	Komödien & Drama, ich lache lieber als zu weinen geben eine kurze auszeit Drama schön weil sie die Realität widerspiegeln
Kino Fragen			

Interviews

Analysis

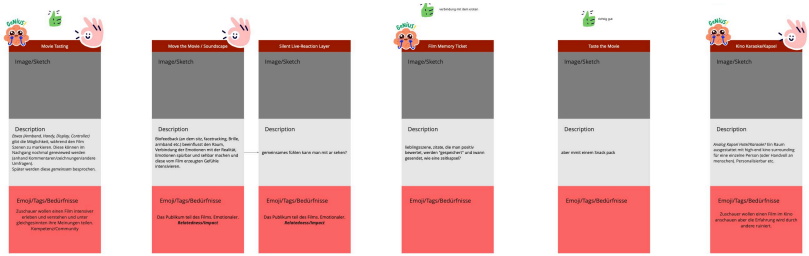

User Experience Design does not solve problems; rather, it enhances existing experiences. For this project, we selected the everyday activity of going to the cinema and examined it in depth through academic research, comparable concepts, and user interviews. Based on these insights, we developed user journeys, contextual analyses, user needs, and target groups.

Design Opportunity

The project's focus eventually shifted to the *post-viewing* phase of the cinema experience. We explored and reinterpreted the concept of film debriefing within the cinema context, extending the experience beyond the moment the movie ends.

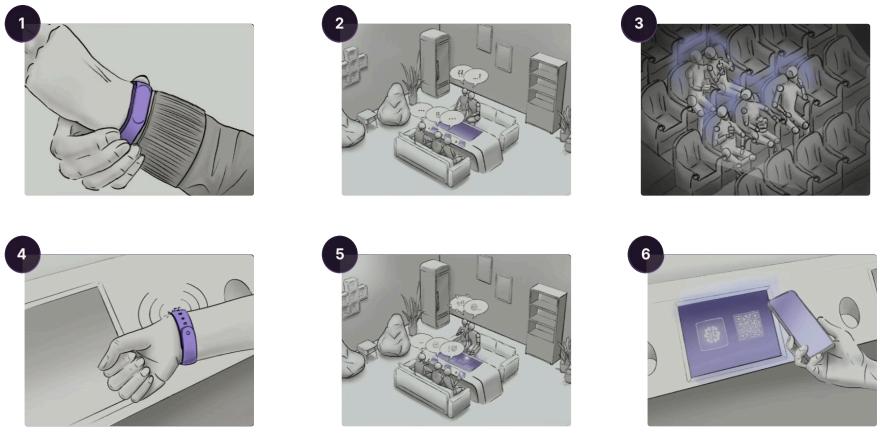

CINEMIND – ideation

Ideas

Concept

Cinema Journeymap

Concept

A dilemma during a cinema visit is the desire to immediately share a memorable scene with others without disrupting their viewing experience for others. At the same time, relocating that exact scene afterwards is often difficult.

Cinemind builds on this behavior by enriching and emotionalizing the cinema experience without intrusively interfering with the act of watching the film itself. Instead, it extends the experience through reflection and shared discussion.

Users can capture emotional reactions or intentionally mark significant scenes while watching. Afterwards, these moments can be revisited together, allowing viewers to exchange impressions and emotions, creating a meaningful foundation for deeper conversations about the film.

Cinemind

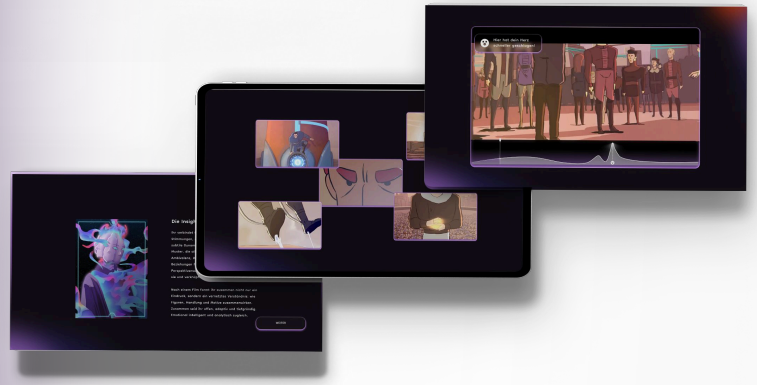

Rating & Watchtype

Marked Scenes/Emotions overview

Collective Scene Watching & Discussion

Mark Scenes & Biofeedback

The wristband collects viewers' biofeedback and identifies emotional peaks throughout the film. In addition, scenes can be manually marked by tapping the wristband.

Scenes Selection

After the screening, marked scenes can be revisited on a personal display, where users decide which moments they would like to discuss.

Scenes Discussion

The selected scenes from all participants are then gathered into a shared scene pool on a central display and viewed together, creating a starting point for collective reflection and discussion.

DETACH

Challenge

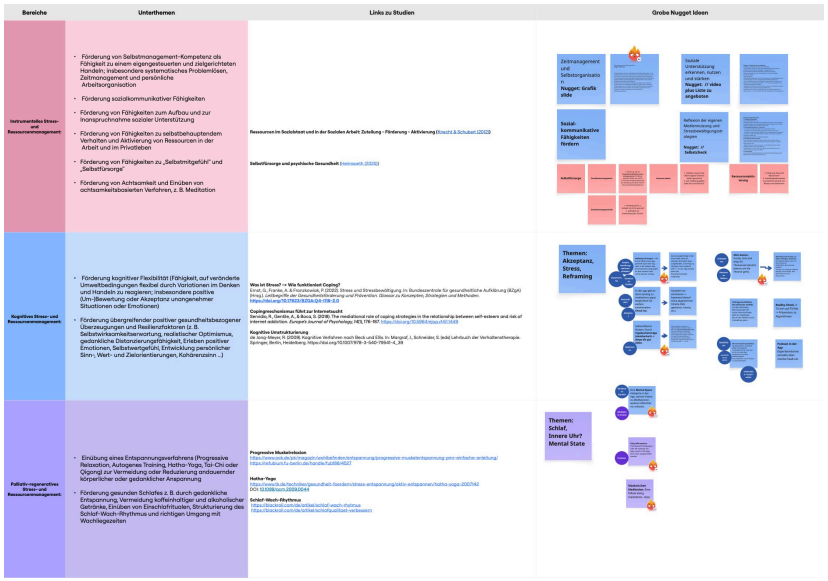

How should the **preventive content** within the *Detach app* be designed to enable users to **identify stress** early, **prevent** it, and **integrate coping strategies** into their daily lives?

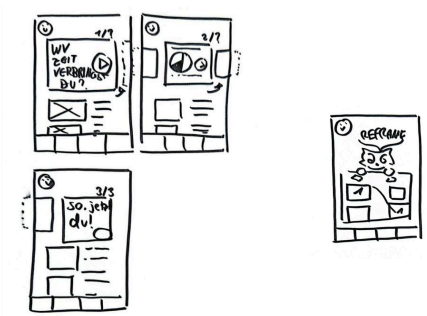

Research | UI/UX | Prototype | Design

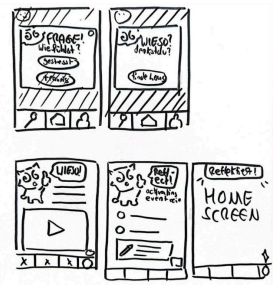

DETACH – research

Ideas Overview

Nugget Sketch

Research

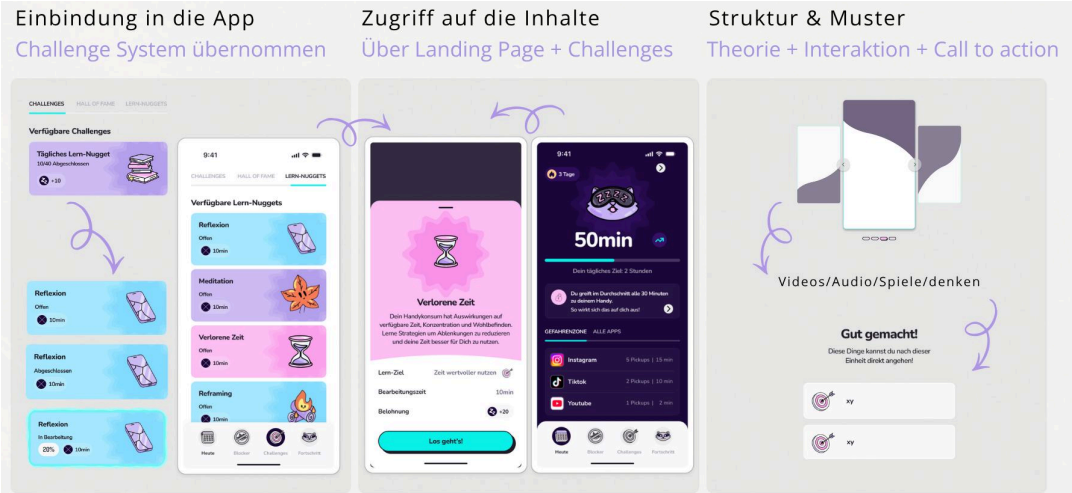

Detach is a startup focused on helping users regulate their screen time. Based on the guidelines of the German Central Prevention Certification Body (ZPP), the goal was to develop learning nuggets that support users through educational content and practical methods. To inform the design process, extensive research was conducted on theories and approaches related to stress regulation and prevention.

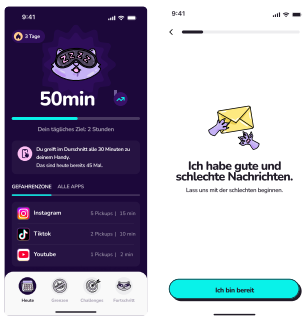

Nugget Selection

For the nugget concept, one idea from each area of stress regulation was selected and further developed into an interactive prototype.

DETACH – ideation

Universal Nugget Structure

Current Design

Familiar Design – New Interactions

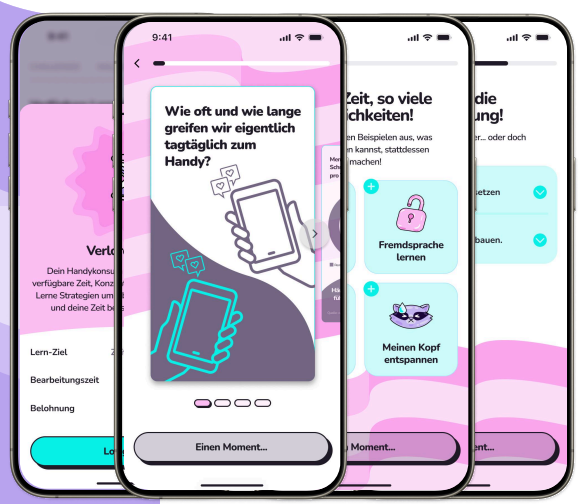

Detach already has a strong and distinctive design language. A key challenge was to seamlessly transfer this design system to the new nugget interface while integrating it into the existing app without disrupting the established user flow.

Universal Nugget Userflow

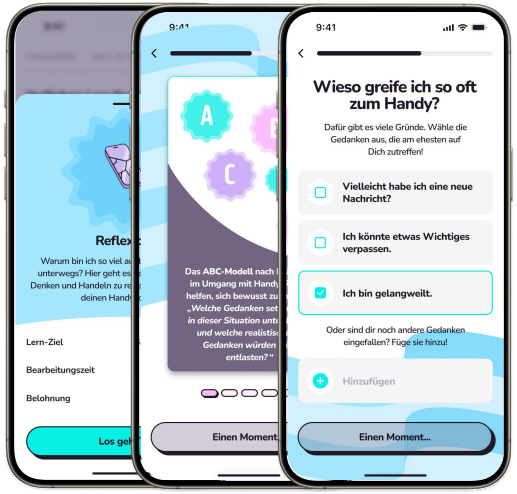

Each nugget follows the same structure, while the content is tailored to its specific topic. An introductory theory section provides context and knowledge, followed by an interactive component that applies the theory through different formats such as videos, card-sorting exercises, or audio content. The final section supports users in integrating what they have learned into their everyday lives.

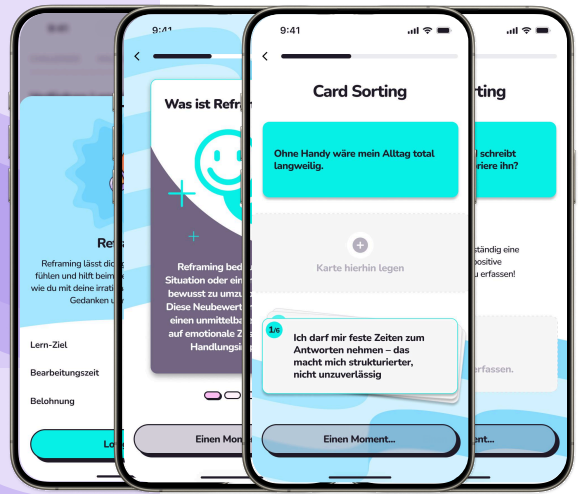

DETACH NUGGETS

Lost Time

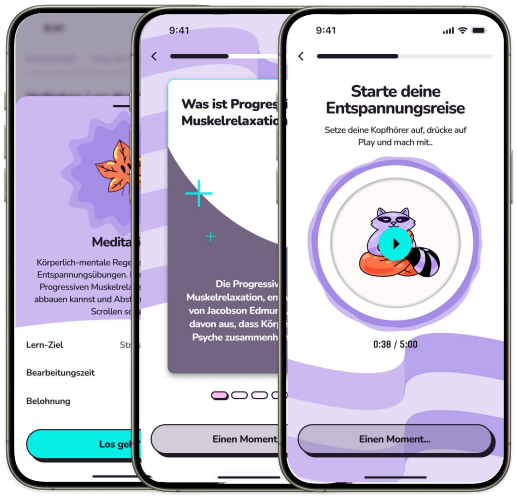

Stresors

Stresors Reframing

Meditation

Nugget 1: Lost Time

This nugget highlights the negative effects of excessive screen time while promoting well-being and encouraging positive behavioral changes through conscious screen-time reduction.

Nugget 2/3: Stressors

This nugget introduces healthy coping strategies and explores cognitive and behavioral approaches that help reduce the perceived threat posed by stressors.

Nugget 4: Meditation

This nugget introduces Progressive Muscle Relaxation, teaching users how to consciously tense and relax individual muscle groups in order to reduce long-term physical and cognitive tension.

MY BEYOND

Challenge

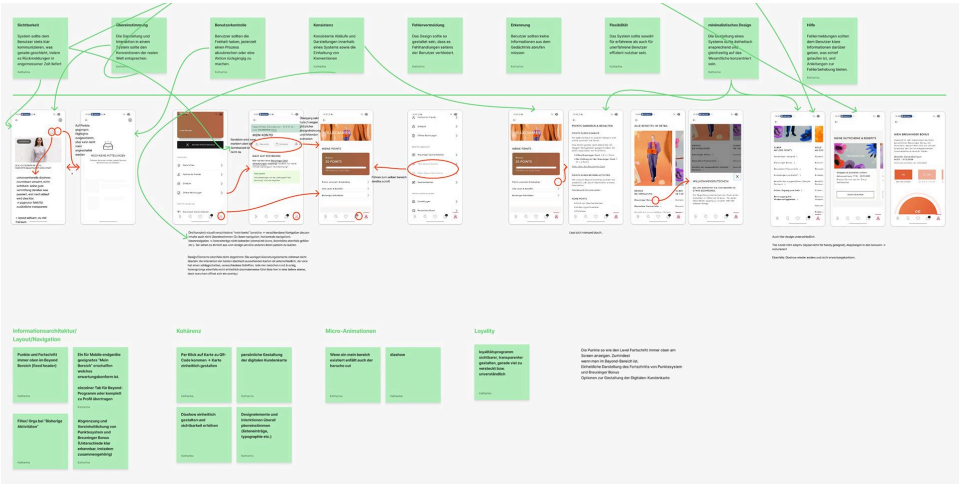

How can the *My Beyond* section of Breuninger be made more **intuitive** and loyalty points be presented more **transparently**?

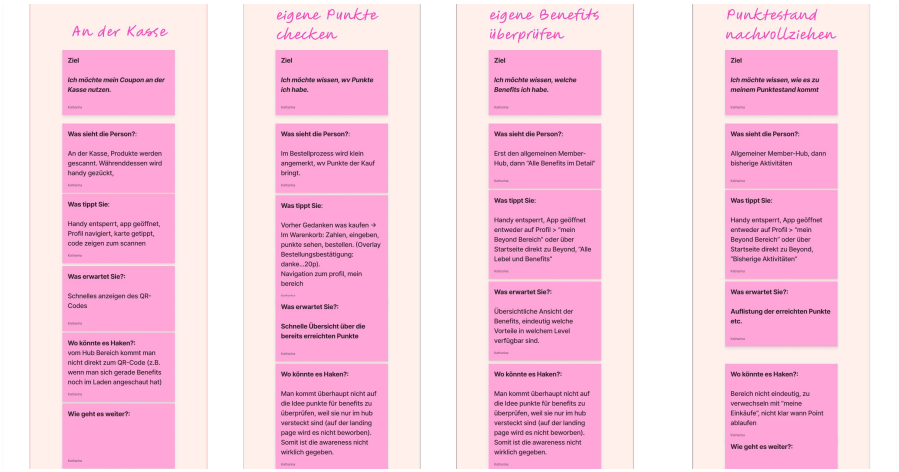

UX/UI | Prototype | Design | E-Commerce

MY BEYOND – analysis

Heuristic Evaluation

Painpoints

Analysis

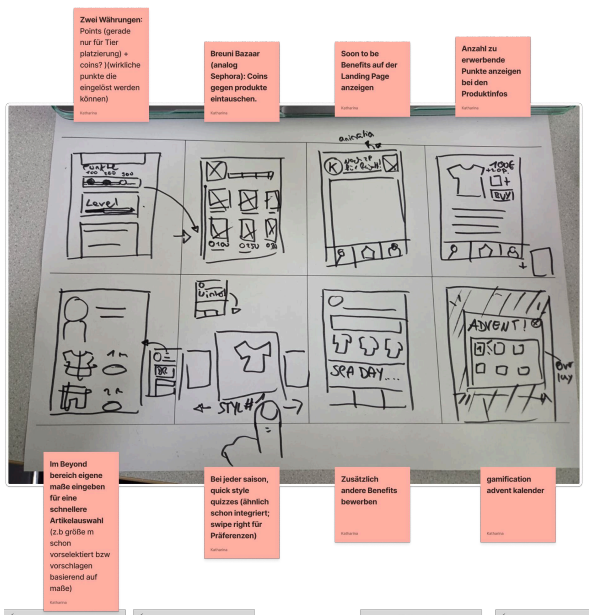

The project began with a heuristic evaluation of the existing *Breuninger* app. Key pain points were identified within the information architecture, the transparency of the loyalty program, and the overall coherence of the MyBeyond section.

Design Focus

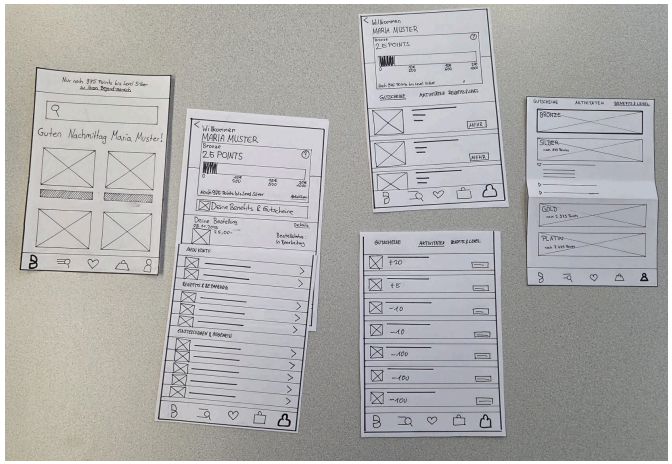

Based on the heuristic evaluation, benchmark analysis, and developed use cases, the concept focused on creating efficient navigation and a clearer presentation of loyalty points within the MyBeyond area.

MY BEYOND – ideation

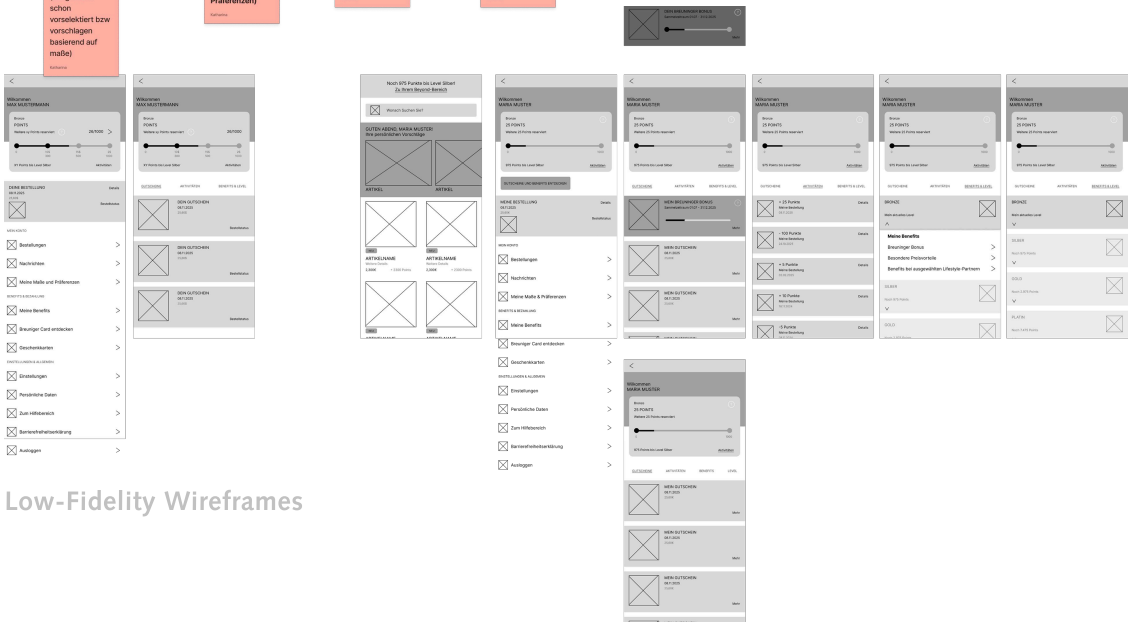

Heuristic Evaluation

Paper-Prototype testing

Low-Fidelity Wireframes

Ideation

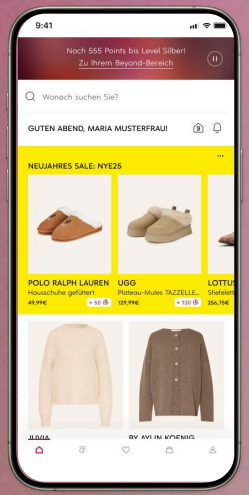

The proposed features and presentation formats were first tested through a paper prototype and usability study. The primary goal was to ensure that the points system was easily understood and that navigation felt intuitive.

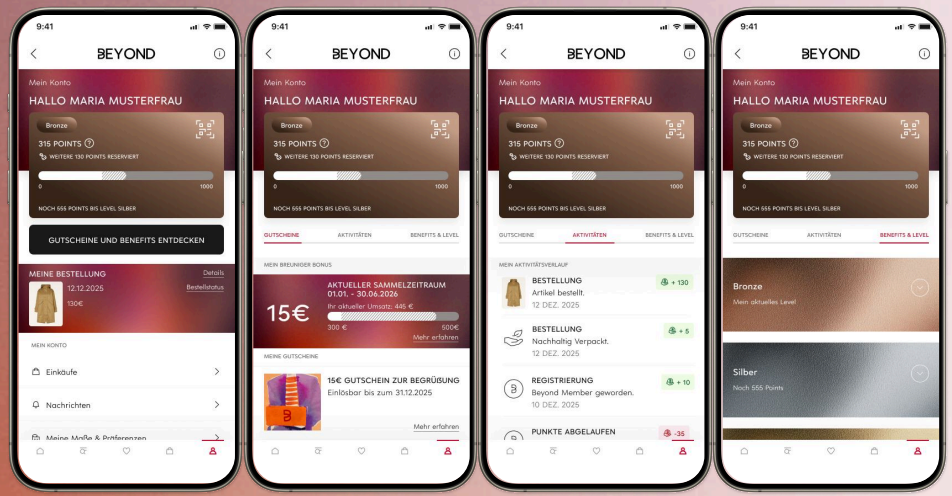

Insights from the test directly informed the subsequent mockups.

A high-fidelity prototype was then developed and evaluated through a second usability test to further validate the concept's usability and intuitiveness.

MyBeyond

MyBeyond Visability Homepage

MyBeyond Section

My Profile is MyBeyond

The traditional Breuninger loyalty card was redesigned into a cohesive, centralized experience that consolidates all relevant information regarding loyalty points in one place.

The visibility of MyBeyond was strengthened throughout the app through a consistent color strategy, ensuring immediate recognition across touchpoints.

Navigation to the user profile now leads directly to the MyBeyond area, creating a simple and consistent user journey. Coupons, purchase history, and membership-level information are easily accessible and presented within a clear, modern structure.

MOODIFY

Challenge

How can we design a **service** that enables **shared music experiences** and fosters both **increased well-being** and more **meaningful social interaction**?

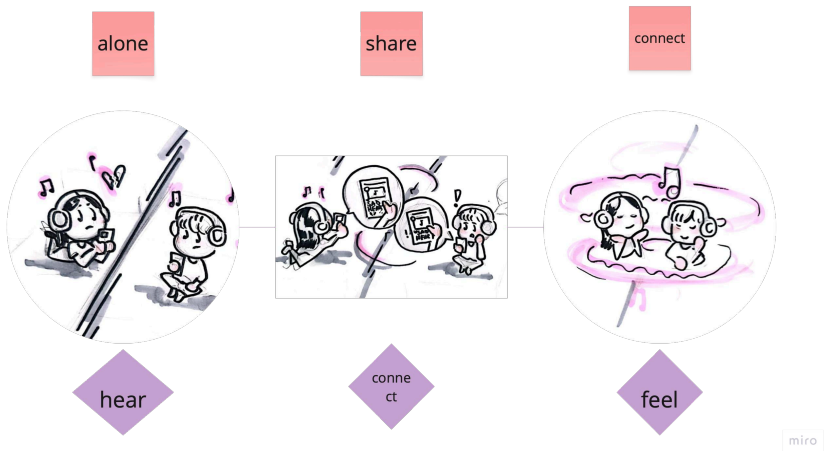

Research | Concept | UX/UI | Design

MOODIFY – research

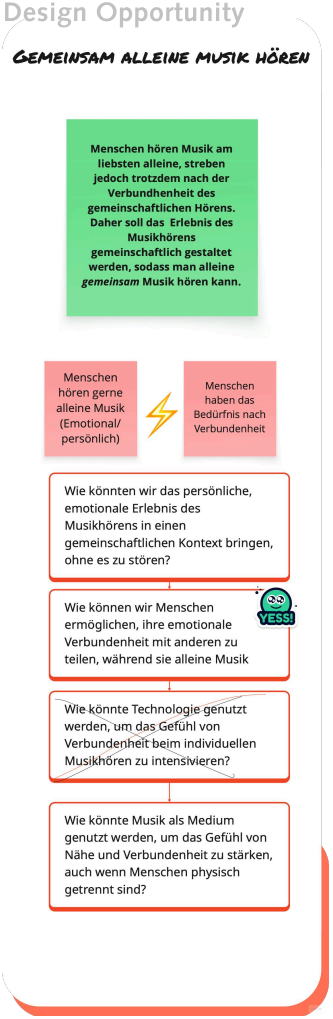

Interview- und Insight Mapping

Design Opportunity Storyboard

Design Opportunity

Research Insights

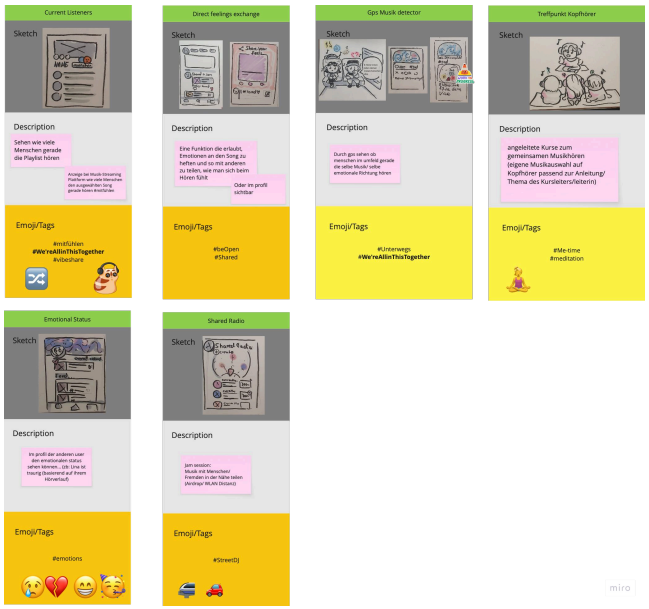

An initial qualitative interview study revealed that people tend to prefer listening to music alone for emotional reasons. At the same time, there is a contrasting need for connection—a sense of shared experience that emerges when music is enjoyed together.

Design Opportunity

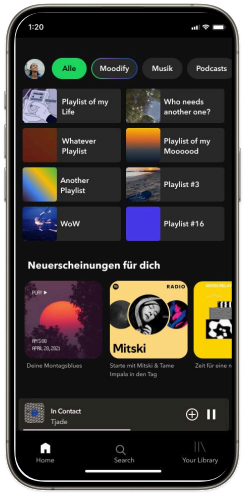

How can we enable people to share emotional connection with others while still listening to music alone?

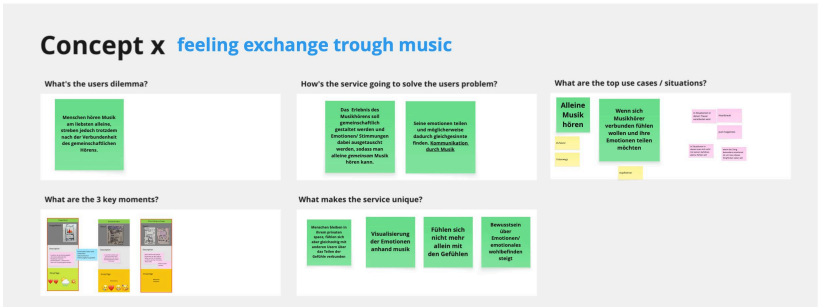

MOODIFY – ideation

Ideation Sketches

Current Spotify

Concept Sheet

Ideation & Design

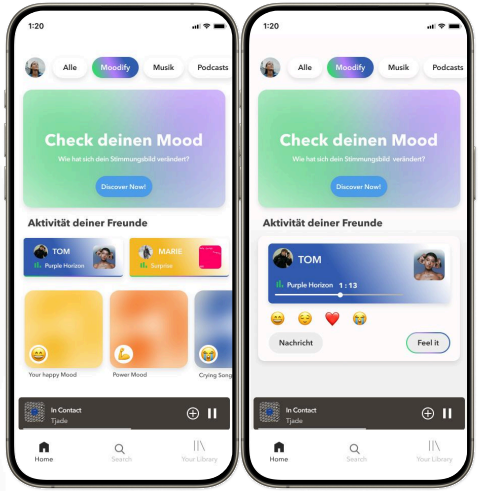

Spotify is dark and cool, whereas Moodify is light and authentic. The key challenge was to translate the existing brand design into a softer, more emotional aesthetic.

The interface is kept simple, with harmonious gradients that dynamically adapt to the listener's mood. Emotions run through the entire UI and evolve with the user. Emojis visualize subjective feelings, while a new friends category introduces greater interactivity. Mood radars and time moods enable deeper emotional reflection.

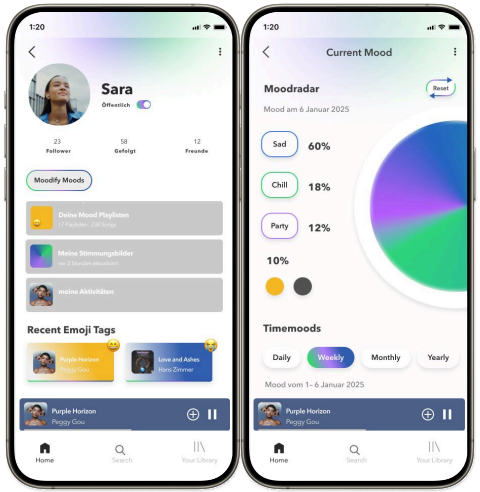

MOODIFY

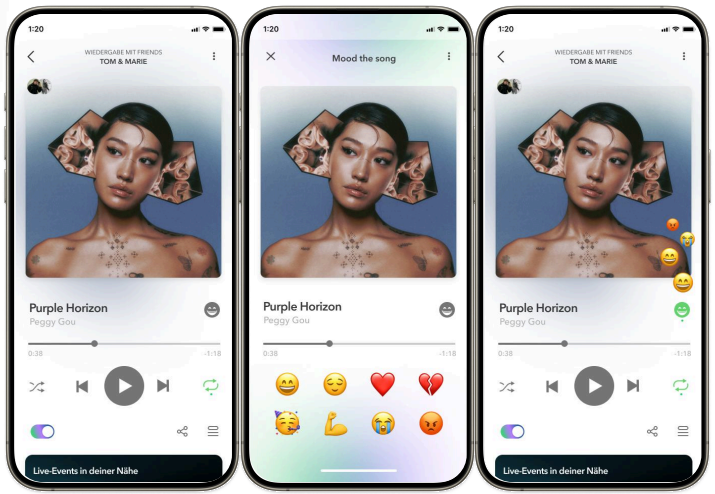

listen - feel - connect

Focus on Connection

Focus on Individuality

Focus on Emotion

Listen to your Emotions

Moodify connects music, emotions, and community by making the emotional journey of listening visually tangible.

Through **emoji tagging**, individual **mood patterns** emerge, showing how songs evoke different emotions for different people. A **live feed** and **friends activity** feature make emotional resonance visible, allowing users to experience what moves others. Music becomes more than sound—it becomes emotion, memory, and connection. Moodify makes these invisible emotional links visible.
